

Staphisagria

Staphisagria is a genus in the family Ranunculaceae. It used to be a subgenus or section in the genus Delphinium, but molecular evidence suggests it should be a genus.[1][2]

There are three species in Staphisagria:[1]

Or two, as some botanists think *S. requienii* and *S. picta* should be united as one species, with *S. picta* treated as *S. requienii* subsp. *picta*. [3]
