

Osbeckia

See text

Osbeckia is a genus of plants in the family Melastomataceae. It was named by Carl Linnaeus for the Swedish explorer and naturalist Pehr Osbeck (1723–1805).

Osbeckias are native to Eastern Asia — China, Japan, Malaysia, India, Sri Lanka and Australasia. Some species have been investigated as herbal remedies.[1][2][3]

The following 11 species are accepted botanical names.[4]

Following botanical names are used in the texts, but categorized as Unresolved by The Plant List.
