

Pergularia

Pergularia is a genus of the botanical family Apocynaceae. Pergularia daemia is a perennial twinning herb that grows along the roadsides of India and tropical and subtropical regions in South Asia, Africa, and Australia.[1]

Pharmacological activities include antiinflammatory, hepatoprotective, anticancer, antidiabetic, antioxidant, antibacterial, antifungal, analgesic, anti-infertility and central nervous system depressant activity.[2]

Moved to other genera – Cionura, Marsdenia, Strophanthus, Telosma, Vincetoxicum (syn. Tylophora), Vallaris
