

Scleria sumatrensis

Scleria sumatrensis, commonly known as nutrush and Sumatran scleria,[3] is a plant species in the sedge family. It is native to temperate and tropical Asia (in China, India, Malesia, and Sri Lanka), where it is usually found growing in wetlands,[4] and is considered a noxious weed on the island of Borneo.[2] It has been used in traditional medicine against gonorrhea.[5]
